Crown Hotel Norwich — Setup Guide

Prerequisites

Before you begin, make sure you have the following installed:

- **Node.js** (v18 or higher) — https://nodejs.org
- **PostgreSQL** (v14 or higher) — https://www.postgresql.org/download
- **Git** — https://git-scm.com

Step 1 — Clone the Repository

Open a terminal and run:

```bash
git clone https://github.com/ypj26etu/HotelWebsite.git
cd HotelWebsite
```

Step 2 — Install Dependencies

```bash
npm install
```

This reads `package.json` and installs all required Node.js packages.

Step 3 — Set Up the Database

3a. Create the database

Open **pgAdmin** or your PostgreSQL client and create a new database called `hotel`:

```sql
CREATE DATABASE hotel;
```

3b. Run the SQL schema

In pgAdmin, open the Query Tool for the `hotel` database, open `hotel-2026.sql` and run it. This will create all tables and insert the sample data.

Alternatively, if `psql` is in your PATH:

```bash
psql -U postgres -d hotel -f hotel-2026.sql
```

Step 4 — Create config.js

Create a file called `config.js` in the project root with your local database credentials:

```javascript
module.exports = {
  development: {
    user:     'postgres',
    database: 'hotel',
    password: 'YOUR_POSTGRES_PASSWORD',
    host:     'localhost',
    port:     5432
  },
  production: {
    user:     'postgres',
    database: 'hotel',
    password: 'YOUR_POSTGRES_PASSWORD',
    host:     'localhost',
    port:     5432
  }
};
```

Replace `YOUR_POSTGRES_PASSWORD` with your local PostgreSQL password.

> **Note:** `config.js` is not in the repository for security reasons. Each developer must create their own.

Step 5 — Start the Server

```bash
node app.js
```

You should see:

```
Crown Hotel app listening on port 3000
```

Step 6 — Open in Browser

Visit: **http://localhost:3000**

Key Pages

Page	URL
Homepage	http://localhost:3000
Rooms	http://localhost:3000/html/rooms.html
Reception (staff)	http://localhost:3000/reception
Housekeeping (staff)	http://localhost:3000/housekeeping
Reports (staff)	http://localhost:3000/reports
Staff Login	http://localhost:3000/html/staff-login.html
Manage Booking	http://localhost:3000/html/manage-booking.html

---

Staff Access

The staff portal is accessible via the Staff Login page.

- **Passcode:** `12345`

Stopping the Server

Press `Ctrl + C` in the terminal.

Restarting After Changes to Backend Files

Any changes to `.js` backend files (e.g. `app.js`, `bookings.js`) require a server restart:

```bash
npx kill-port 3000
node app.js
```

Project Structure

```
HotelWebsite/
├── app.js              — Express server and all routes
├── bookings.js         — All database queries
├── config.js           — PostgreSQL connection config (create locally)
├── package.json        — Node.js dependencies
├── hotel-2026.sql      — Database schema and sample data
├── views/
|   ├── reception.ejs   — Reception staff page
|   ├── housekeeping.ejs — Housekeeping staff page
|   └── reports.ejs     — Weekly reports page
└── public/
    ├── index.html      — Homepage
    ├── styles.css      — Main stylesheet
    ├── html/           — All customer-facing HTML pages
    ├── scripts/        — Frontend JavaScript
    ├── stylesheets/    — Staff CSS
    └── assets/         — Images and videos
```

Troubleshooting

`psql` **not recognised** Add PostgreSQL to your PATH, or use pgAdmin to run SQL files.

Port 3000 already in use

```bash
npx kill-port 3000
node app.js
```

`Cannot find module` **error** Run `npm install` again from the project root.

Database connection error Check your `config.js` password matches your local PostgreSQL installation.

`relation "hotelbooking.room" does not exist` The SQL file hasn't been run yet. Follow Step 3 above.
